

# Project Title

Student name + number

**Repository URL**

**URL to run the project**

Introduction to Computer Graphics – 2025/2026 – Final Project

# Files you have to deliver on Moodle

- **README.txt**
  - Student Name and Student Number
  - Project Name
  - URL of deployed project, that can be used to run it
  - URL of GitHub repository
  - URL of demo video
- **Project\_Presentation.pdf**
  - Your presentation slides
  - PDF is mandatory !!
- **Prefix the filenames with you Student Number**
  - **12345\_README.txt / 12345\_Project\_Presentation.pdf**

# Presentation Guidelines

- The presentation can be done in English or Portuguese; the choice is yours
- Do not write full sentences, just topics
- **It is a Computer Graphics project; images are expected in (almost) every slide. Use diagrams and screenshots!!**
- This is just a possible skeleton for your slides; add more slides when needed – but not too many...
- **Total presentation time is between 12 to 15 minutes, including a demo of your project and time for questions**
  - **Slides presentation 6-7 min + Live-Demo 4-5 min**

# The Project

- What is your project about?
- What can the user do?
- Are you using just the basic three.js or also additional modules?
- What is the Three.js version used?

# Models & Scene Graph

- What models do you have?
- How is the scene graph organized?
- Show the scene graph as a tree diagram

# Illumination & Materials & Textures

- How are you achieving visual realism?
  - Which kind of materials? Why?
  - And light sources?
  - Are you using any shaders? Where from?
- 
- What kinds of texture maps are you using?
  - What are their purposes?
  - Where are the texture maps coming from?

# Animation

- Which animations are there?
- How are they carried out?
- Give some details: timing, Mathematics, etc.

# User Interaction

- What kind of camera are you using? Why?
- How is the user interacting with the application?
- What can he/she do?
- Mouse?
- Keyboard?
- Menus?

# Development

- Development environment
- Code organization
- Implementation details, if important and different from what we have been doing
  - Screenshots can be illustrative
- Problems / difficulties

# Use of AI

- Detail the degree of IA use!
- Which tools? For which tasks?
- Give details, such as:
- “GitHub Copilot suggested the logic of the Scene Graph.”
- “ChatGPT was used to debug the mapping of textures”
- Etc.

# Performance & Conclusions

- Did you take into account any performance issues?
- Does the project run without restrictions in different Web browsers, including on a smartphone?
- What are the most important/interesting features of your project?
- What would you do differently, if starting the project now?

# References

- Main materials used (books, tutorials, sites, etc.)
- Not just URLs
